rileybgarside@gmail.com

EDUCATION - BIOTECHNOLOGY, B.S. (Graduating Spring 2026)

Utah Valley University, August 2021 - Present

3.93 GPA

PROFESSIONAL EXPERIENCE

Analytical Resource Laboratories, August 2025 - Present

Chemistry Lab Assistant

- Prepare consumer product samples for ICP-MS testing
- Maintained a clean and orderly lab environment
- Operate instrumentation such as analytical balances and digestion microwaves
- Followed lab documentation protocols

Baltic Born, May 2023 - Oct 2024, Feb 2025 - Present

Fulfillment Specialist

- Packaged and shipped customer orders
- Restocked shipping stations with supplies
- Maintained a clean and orderly work environment
- Operated shipping software using basic technological skills
- Inspected returned items
- Placed processed return items back into inventory
- Maintained inventory organization
- Collected and organized customer orders into batches ready for shipping
- Cut and assembled fabric swatches

WE Ice, Summer 2020, Summer 2021, Summer 2022

Worker

- Opened/prepared the trailer for business
- Operated ice-shaving machinery
- Prepared and served shaved ice treats
- Took orders and money from customers
- Various housekeeping/cleaning duties
- Closed the trailer down after business hours
- Communicated with employer and fellow employees
- Kept track of inventory

AWARDS

UVU College of Science Faculty and Staff Scholarship, May 2025

UVU College of Science Dean's List, Fall 2021 - May 2025

UVU Utah Resident Freshman Academic Merit Scholarship, March 2021 - May 2025

COMPLETED COURSEWORK

General Microbiology & Lab (MICR 3450 & 3455)

Completed Spring 2025

Covers taxonomy, physiology and genetics of bacteria, archaea, viruses and eukaryotic microbes. Introduces industrial microbiology, biotechnology, and immunology and the biochemical basis of infectious diseases as well as methods used. Includes a semester project where students research, characterize, then present findings on a microbiome of their choice.

Biological Chemistry Lab (BIOL/CHEM 3605)

Completed Spring 2025

Introduces laboratory techniques in biochemistry. Studies methods and theory behind purification of proteins and nucleic acids including chromatography and electrophoresis. Uses methods in assessing enzyme activity and kinetics and protein structure analysis. Includes analysis and manipulation of DNA and RNA.

Organic Chemistry I & II Labs (CHEM 2315 & 2325)

Completed Spring & Fall 2024

Introduces safety in organic chemistry lab and chemical waste disposal. Teaches basic separatory, purification, and analytical techniques in organic chemistry such as crystallization, melting points, distillation and chromatography. Introduces organic synthesis using simple organic reactions and natural product isolation. Provides hands-on experience in organic synthesis using a series of single and multistep transformations. Teaches identification of products of reactions using spectroscopic techniques. Explores biologically important organic molecules.

Cell Culture Techniques (BTEC 2030)

Completed Fall 2024

Teaches basics of eukaryote cell culture. Includes handling, storage, and maintenance of mammalian stocks. Emphasizes media preparation and sterile techniques. Includes in vitro labeling and transfection. Includes the design, execution, and presentation of a final research project of the student's choice.

Advanced Nucleic Acid Laboratory (BTEC 2040)

Completed Fall 2023

Teaches advanced nucleic acid modification and analysis methods. Includes site-directed mutagenesis, DNA sequencing, and RNA analysis methods, high-resolution DNA melting for genotyping and real-time PCR to quantitate DNA in samples. Incorporates methods to mutate 2 genes using CRISPR gene editing technology followed by RT-PCR to analyze gene expression (RNA isolation, creating cDNA, followed by real-time PCR). Students are required to participate in a self-driven research project utilizing one or more of the techniques taught during the semester.
